Region/State

Region 5

Which of the following best describes current conditions in this county?

Mildly Dry (soil is drier than normal, plant growth may have slowed)

If conditions are on the dry end, which of the following US Drought Monitor categories best fit current conditions. To better judge the fit, see explanation of USDM categories here:

<https://droughtmonitor.unl.edu/About/AbouttheData/DroughtClassification.aspx>

Near Normal (Dnada)

Quick synopsis of conditions that will appear in the main feed

2023 planting is nearly done with most farmers in the area finished planting. The dry April weather has allowed spring planting to progress quickly. The cool temperatures for the second half of April has slowed emergence and plant growth of plants that have emerged.
