Corn growth varies from emerging to almost V3

Field Photo Upload Caption 2

Soybean growth varies from emerging to V1

Which of the following best describes current conditions in this county?

Moderately Wet (soil is damp, standing water may be present in low areas, water bodies are full)

If conditions are on the dry end, which of the following US Drought Monitor categories best fit current conditions. To better judge the fit, see explanation of USDM categories here:

<https://droughtmonitor.unl.edu/About/AbouttheData/DroughtClassification.aspx>

Near Normal (Dnada)

Quick synopsis of conditions that will appear in the main feed

All crops are planted. Corn growth stages vary from emerging to almost V3 with third leaf almost fully developed. Soybean are similar varying between just breaking through the ground to first trifoliolate.
