### Field Photo Upload Caption 3

Waterhemp coming on strong.

### Which of the following best describes current conditions in this county?

Mildly Wet (soil is wetter than normal, local vegetation is healthy)

If conditions are on the dry end, which of the following US Drought Monitor categories best fit current conditions. To better judge the fit, see explanation of USDM categories here:

<https://droughtmonitor.unl.edu/About/AbouttheData/DroughtClassification.aspx>

Near Normal (Dnada)

### Quick synopsis of conditions that will appear in the main feed

This field was replanted into the original stand because most of the field was only 50,000 plants per acre after planting early, saturated soils, and then hail. Several weeds such as waterhemp and ivyleaf morning

glory are coming on strong. Post herbicide will be needed soon.

**Weather**

80's

**Precipitation**

Finally dry after heavy rain a week or so ago

**Field/Soil Conditions**

Normal

**Field/Soil Activities**

Replant

**Soybean Growth Stage**

Seed - V2

**Insects**

None

**Weeds**

Waterhemp and Ivyleaf morning glory that is 1 to 3 inches tall

**Diseases**

None

**Abiotic Issues**

Previous hail injury
