Overcome challenging residue in no-till by angling the row slightly.

Which of the following best describes current conditions in this county?

Mildly Dry (soil is drier than normal, plant growth may have slowed)

If conditions are on the dry end, which of the following US Drought Monitor categories best fit current conditions. To better judge the fit, see explanation of USDM categories here:

<https://droughtmonitor.unl.edu/About/AbouttheData/DroughtClassification.aspx>

Near Normal (Dnada)

Quick synopsis of conditions that will appear in the main feed

Conditions are dry across northern Illinois depending on the spotty pop up showers. Many soybeans planted from May 9-15 were challenged in no-till fields due to dry conditions and tightening soils. The key is to ensure good seed to soil contact and keep row cleaners working well in no-till environments.
