Corn gets a sip of water from dew.

Field Photo Upload Caption 2

Wheat harvest. 2023. Rainbow but no water.

Which of the following best describes current conditions in this county?

Moderately Dry (soil is dry, plants may be browning or stressed, water bodies are low)

If conditions are on the dry end, which of the following US Drought Monitor categories best fit current conditions. To better judge the fit, see explanation of USDM categories here:

<https://droughtmonitor.unl.edu/About/AbouttheData/DroughtClassification.aspx>

Moderate Drought (D1)

Quick synopsis of conditions that will appear in the main feed

Corn is hanging on as we are at least getting dew that runs down to the base of the plant. Wheat yield reports continue to be excellent. Both in bu/ac and test weight. Despite the dark clouds and a rainbow, no rain now in many locations for 35 days.
