Silks and tassels are emerging.

Which of the following best describes current conditions in this county?

Mildly Wet (soil is wetter than normal, local vegetation is healthy)

If conditions are on the dry end, which of the following US Drought Monitor categories best fit current conditions. To better judge the fit, see explanation of USDM categories here:

<https://droughtmonitor.unl.edu/About/AbouttheData/DroughtClassification.aspx>

Moderate Drought (D1)

Quick synopsis of conditions that will appear in the main feed

Since June 29th, our area has received about 7 inches of rain; however, we are still in a moderate drought. Crops are in the reproductive stage. Corn height in fields is all over the place.

Weather

Rain off and on with sunny days.

Precipitation

7 inches since June 28th.

Field/Soil Conditions

Fields appear saturated, but still dry in the subsoil.

Soybean Growth Stage

R1

Corn Growth Stage

R1

Insects

Japanese beetle pressure

Weeds

Pressure is minimal.
