Logan

Region/State

Region 4

Which of the following best describes current conditions in this county?

Moderately Wet (soil is damp, standing water may be present in low areas, water bodies are full)

If conditions are on the dry end, which of the following US Drought Monitor categories best fit current conditions. To better judge the fit, see explanation of USDM categories here:

<https://droughtmonitor.unl.edu/About/AbouttheData/DroughtClassification.aspx>

Near Normal (Dnada)

Quick synopsis of conditions that will appear in the main feed

Rains over the last few days have prevented farmers from finishing planting their crop acres for 2024. The National Weather Service in Lincoln reported 0.38" of rain in the last 24 hours, and many low spots on fields have standing water. More rain is predicted for 5/7 and 5/8. Much of the soybeans and corn that were planted in mid-April have emerged. Soybeans in the area are in the VE growth stage, while corn in the area is in the VE to V1 growth stage.
