VC soybeans

Which of the following best describes current conditions in this county?

Mildly Wet (soil is wetter than normal, local vegetation is healthy)

Quick synopsis of conditions that will appear in the main feed

We are just about dry enough to begin fieldwork (again) on Mother's Day weekend. Morningglory showed up in corn after last week's report. Soybeans are clean. Only one cutworm moth was caught in trap and a few corn plants had wireworm injury. Next up will be spotting in soybeans in drowned out areas of various fields.

Weather

75F

Precipitation

None

Field/Soil Conditions

Not quite dry enough for fieldwork

Field/Soil Activities

None

Soybean Growth Stage

VC

Corn Growth Stage

V2
