County

St. Clair

Region/State

Region 6

Which of the following best describes current conditions in this county?

Moderately Wet (soil is damp, standing water may be present in low areas, water bodies are full)

Quick synopsis of conditions that will appear in the main feed

It has been wet and very little if any planting has occurred in the last few weeks. Corn planted in April is up, although standing water has created dead areas that will require spot replants at very least. I've heard reports of 3"-7" of rain throughout southern Illinois since May 1. Given the forecast, it may be a while before fieldwork can resume on non-tiled land.
