Waiting for replant opportunity

Which of the following best describes current conditions in this county?

Moderately Wet (soil is damp, standing water may be present in low areas, water bodies are full)

Quick synopsis of conditions that will appear in the main feed

In Northeast Illinois some were fortunate to plant for several days while others have yet to attempt field work in the month of May. Crop scouting is critical to determine stand counts and the presence of drowned out areas. Waterhemp seedlings can easily be found in fields. For post herbicide applications be aware of weed height recommendations. A general rule is treating most weeds in the 3 to 4 inch stage.
