Region 4

#### Which of the following best describes current conditions in this county?

Near Normal

If conditions are on the dry end, which of the following US Drought Monitor categories best fit current conditions. To better judge the fit, see explanation of USDM categories here:

<https://droughtmonitor.unl.edu/About/AbouttheData/DroughtClassification.aspx>

Near Normal (Dnada)

#### Quick synopsis of conditions that will appear in the main feed

Conditions across Logan, Menard, and Sangamon counties in the last week have allowed many farmers to catch up on their planting. While there were some small pockets of rain in certain areas, no major accumulations were observed. The last few days have brought a lot of warm weather to the area, and some rain is in the forecast. The crops that have been planted and emerged look healthy. Corn acres that were planted earlier are mostly in the V2-V3 stage, and earlier-planted soybeans are in the V1-V2 stage.
