V2 Soybeans (planted in April)

Field Photo Upload Caption 3

Replant soybeans already emerged after being planted on Mother's Day

Which of the following best describes current conditions in this county?

Mildly Wet (soil is wetter than normal, local vegetation is healthy)

Quick synopsis of conditions that will appear in the main feed

The heat has the early April planted crops growing fast. The corn has grown 2 growth stages in a week. Weeds are also coming on strong in the corn and it was just sprayed with post herbicides. The soybeans remained clean. The wet holes in soybeans that were replanted on Mother's Day have already emerged. No signs of disease or pests. Many had a chance to get in the field again.

Weather 75 F
Precipitation Very little - a tenth with each passing storm.
Field/Soil Conditions Dry
Field/Soil Activities Planting, Burndown and post spraying, tillage
Soybean Growth Stage V2, VC, and just planted
Corn Growth Stage V4, just planted
Insects None
Weeds Morning glory, waterhemp
Diseases None
