County

Franklin

Region/State

Region 7

Which of the following best describes current conditions in this county?

Moderately Wet (soil is damp, standing water may be present in low areas, water bodies are full)

Quick synopsis of conditions that will appear in the main feed

Last weekend conditions started drying up enough to allow field activity to kick off throughout southern Illinois. Since last report, early beans have been emerging and reaching ~V1-V2.

Also wheat has begun senescing throughout the region, about 1-2 weeks ahead of the usual pace. This could translate to an early harvest and double crop but weather over the next 3-4 weeks will have the final say.
