Winds were a bit wild in the area. This corn was basically sand blasted. The growing point is still below the ground so recovery is expected.

Which of the following best describes current conditions in this county?

Mildly Wet (soil is wetter than normal, local vegetation is healthy)

Quick synopsis of conditions that will appear in the main feed

Farmers were tilling, spraying, and planting in between storms and high winds. We've made a lot of ground this week but there are still a fair amount of fields yet to be planted. Weeds are emerging.

Weather

Two minute rain today. The storm dumped much more rain farther west.

Precipitation

Could use a nice gentle rain.

Field/Soil Conditions

Some areas are crusted. Soybeans are losing stand pushing through. Good subsoil moisture.

Field/Soil Activities

Everything!

Soybean Growth Stage

VC to R1

Corn Growth Stage

V1-V3

Weeds

Waterhemp is breaking through PREs. Scout to time POST applications appropriately.

Abiotic Issues

Wind damage, abrasion

Cover Crop Insights

Some termination this week. Some fields still awaiting application.
