Of all areas across the state, my area has the early planted fields and the late planted fields

Field Photo Upload Caption 2

Wheat fields are looking good with low levels of head scab present.

Field Photo Upload Caption 3

The 3-county area is over 95% planted, but there are still some fields needing to be planted.

Which of the following best describes current conditions in this county?

Mildly Wet (soil is wetter than normal, local vegetation is healthy)

Quick synopsis of conditions that will appear in the main feed

Early planted corn and soybean fields are in the V6 and 3rd trifoliate stages, respectively. Most fields in the area are planted, but there are still a few fields have to be planted in the areas that received heavy rains. Ponding in planted fields is a problem in some areas. The emerged crops look good but there is a wide range in plant growth.

The few wheat fields in area are looking good with very little head scab and plant health generally looks good.
