County

Warren

Region/State

Region 2

Which of the following best describes current conditions in this county?

Mildly Wet (soil is wetter than normal, local vegetation is healthy)

If conditions are on the dry end, which of the following US Drought Monitor categories best fit current conditions. To better judge the fit, see explanation of USDM categories here:

<https://droughtmonitor.unl.edu/About/AbouttheData/DroughtClassification.aspx>

Near Normal (Dnada)

Quick synopsis of conditions that will appear in the main feed

Planting is back in action across the county with some replants due to soil crusting. Some fields did see some extent of wind damage from a storm 5/24 but are bouncing back. Most fields are looking around V2-V6 for corn and VC-V2 for soybeans depending planting date.
