### Field Photo Upload Caption 1

Wheat -

### Field Photo Upload Caption 2

V5 corn, field has some drowned out spots. Across the road from the next picture.

### Field Photo Upload Caption 3

V1 corn, recently planted. This field was the same as the standing water I've posted in a previous report. Fields are still being planted in the area. Finally a good run.

### Which of the following best describes current conditions in this county?

Mildly Wet (soil is wetter than normal, local vegetation is healthy)

### Quick synopsis of conditions that will appear in the main feed

It's a race to finish planting before the forecasted rain.

### Weather

Finally a dry stretch to get a significant amount of acres and planted in the area.

**Precipitation**

Forecasted for the weekend but we've had a great week of weather.

**Field/Soil Conditions**

Dry enough to plant. Good moisture underneath.

**Field/Soil Activities**

Planting!!!!

**Soybean Growth Stage**

Just planted up to V2.

**Corn Growth Stage**

Just planted up to V5.

**Wheat Growth Stage**

Pictured in this report.

**Weeds**

Waterhemp is tall in places. Calls from Iowa on Giant Ragweed in soybeans uncontrolled and field horsetail in corn (NIGHTMARE!!!). Corn in northern Illinois is pushing herbicide label restrictions.

**Cover Crop Insights**

All the cover crops appear to finally be terminated. Many fields will have a good mulch layer to help control weeds.
