Soybeans at VC

### **Field Photo Upload Caption 2**

Corn at V4. Almost all corn in the area was V2-V4

### **Which of the following best describes current conditions in this county?**

Moderately Wet (soil is damp, standing water may be present in low areas, water bodies are full)

### **Quick synopsis of conditions that will appear in the main feed**

In western Clinton County, there is quite a bit of corn out of the ground, almost all of which is between V2-V4. I saw no beans past VC in the area.

I drove down to Carbondale earlier this week and would venture to say that almost all of the corn in the western side of southern Illinois has been planted, and around 75% of first crop beans. South central Illinois is farther behind.
