Corn at IVCC plots

**Field Photo Upload Caption 2**

Soy at IVCC plots

**Which of the following best describes current conditions in this county?**

Near Normal

**Quick synopsis of conditions that will appear in the main feed**

Like much of the state, in LaSalle County it has been hot with only one day in the past week having some scattered showers. There are some scattered thunderstorms in the forecast for next week, though. Overall crops are still looking good, but the soil is starting to dry out a bit on top. Corn at the IVCC research and demonstration plots is at V5, and soy is at V2/3 (both planted May 20). Later planted or replanted crops in LaSalle County are at similar maturity, but earlier planted corn is reaching V10 - V11 stage and some earlier soy is getting close to R1.
