County

Logan

Region/State

Region 4

Which of the following best describes current conditions in this county?

Near Normal

If conditions are on the dry end, which of the following US Drought Monitor categories best fit current conditions. To better judge the fit, see explanation of USDM categories here:

<https://droughtmonitor.unl.edu/About/AbouttheData/DroughtClassification.aspx>

Near Normal (Dnada)

Quick synopsis of conditions that will appear in the main feed

Not much has changed in the way of crop growth across Logan, Menard, and Sangamon counties over the last week. Nearly all of the earlier-planted corn has tasseled, with the rest of the corn crop not too far behind in some areas. Soybean growth remains strong as well. Some insect damage can be found on leaves, but nothing that will affect yields at this moment.
