County

Warren

Region/State

Region 2

Which of the following best describes current conditions in this county?

Mildly Wet (soil is wetter than normal, local vegetation is healthy)

If conditions are on the dry end, which of the following US Drought Monitor categories best fit current conditions. To better judge the fit, see explanation of USDM categories here:

<https://droughtmonitor.unl.edu/About/AbouttheData/DroughtClassification.aspx>

Near Normal (Dnada)

Quick synopsis of conditions that will appear in the main feed

Driving around Warren County, a large percentage of corn is tasseling. Soybean fields are averaging R2/R3. We've had about average rainfall for the area I'm in and just keeping an eye out for diseases as the weather has remained humid with cooler overnights. Quite a number of crop dusters have been out and about around the county.
