#### Which of the following best describes current conditions in this county?

Near Normal

If conditions are on the dry end, which of the following US Drought Monitor categories best fit current conditions. To better judge the fit, see explanation of USDM categories here:

<https://droughtmonitor.unl.edu/About/AbouttheData/DroughtClassification.aspx>

Abnormally Dry (D0)

#### Quick synopsis of conditions that will appear in the main feed

The recent rains from the remnants of Beryl delivered much needed rains to my 3-county area with totals ranging from 1.25 to 3.7 inches. This has been in US Drought Monitor categories: Abnormally Dry to Moderate Drought. At this moment, the corn varies from pollination (R2) to nearly VT stage. All soybeans are blooming with some setting pods. Currently, corn leaf diseases are hard to find and soybeans are suffering some leaf feeding from Japanese beetles.
