Region 4

Which of the following best describes current conditions in this county?

Near Normal

If conditions are on the dry end, which of the following US Drought Monitor categories best fit current conditions. To better judge the fit, see explanation of USDM categories here:

<https://droughtmonitor.unl.edu/About/AbouttheData/DroughtClassification.aspx>

Near Normal (Dnada)

Quick synopsis of conditions that will appear in the main feed

Corn and soybeans across the area continue to look healthy, and growing progress remains steady. Many corn fields have been successfully pollinated. Spray planes have also been active the last couple of weeks, with producers putting on fungicides. Soybeans have nearly all flowered, with most also starting to grow pods. Some rain would be welcome, but there does not appear to be a lack of moisture in the soil.
