Corn at IVCC + Extension plots

### **Which of the following best describes current conditions in this county?**

Near Normal

**If conditions are on the dry end, which of the following US Drought Monitor categories best fit current conditions. To better judge the fit, see explanation of USDM categories here:**

**<https://droughtmonitor.unl.edu/About/AbouttheData/DroughtClassification.aspx>**

Near Normal (Dnada)

### **Quick synopsis of conditions that will appear in the main feed**

LaSalle County experienced a good amount of precipitation this week from the several large storm systems that moved through the area. Luckily, we have not seen any severe damage from these storms. I also have not noticed much standing water in fields. Corn at the IVCC + Extension plots is tasseling or getting close to it. Soybeans are flowering. The IVCC + Extension plots are a little behind in development compared to fields in a lot of LaSalle County. Corn in many fields is tasseling, silking, or has been successfully pollinated.
