County

Winnebago

Region/State

Region 1

Which of the following best describes current conditions in this county?

Moderately Wet (soil is damp, standing water may be present in low areas, water bodies are full)

Quick synopsis of conditions that will appear in the main feed

After last week's storms, the corn that was most heavily impacted (which was minimal) has mostly come back up. Everything still looks very healthy as we continue to receive rainfall. Corn is silking and soybeans are anywhere between R3 and R5. I have seen some rootworm beetles and subsequent silk clipping but not in high amounts. Soybeans have some Japanese beetle feeding but it's very minimal. I also have not seen any significant disease pressure.
