Region 4

Which of the following best describes current conditions in this county?

Near Normal

If conditions are on the dry end, which of the following US Drought Monitor categories best fit current conditions. To better judge the fit, see explanation of USDM categories here:

<https://droughtmonitor.unl.edu/About/AbouttheData/DroughtClassification.aspx>

Near Normal (Dnada)

Quick synopsis of conditions that will appear in the main feed

Crop growth remains much the same as last week. There were some pop-up showers on Monday, but these did not bring much in the way of total precipitation. Storms are in the forecast for tonight, so hopefully, there will be enough rainfall to replenish topsoil moisture. Much of the corn crop remains in the R4 to R5 stages, with the later planted corn in the R3 stage. Most of the soybeans in the area have fully developed pods, with some beginning to form seeds inside the pod.
