Logan

Region/State

Region 4

Which of the following best describes current conditions in this county?

Near Normal

If conditions are on the dry end, which of the following US Drought Monitor categories best fit current conditions. To better judge the fit, see explanation of USDM categories here:

<https://droughtmonitor.unl.edu/About/AbouttheData/DroughtClassification.aspx>

Near Normal (Dnada)

Quick synopsis of conditions that will appear in the main feed

Crop conditions continue to look good around Logan, Menard, and Sangamon counties. While there has not been much rain in the last week, cooler temperatures have ensured plants are not under heat stress as we approach maturity. There have not been any significant reports of any diseases across the area, though some isolated cases may be present. Many local producers have also completed their third hay cutting for the year. With the cooler temperatures and rain over the last couple of weeks, many fields are already starting to grow back nicely and could see a fourth cutting.
