### County

Warren

### Region/State

Region 2

### Which of the following best describes current conditions in this county?

Mildly Wet (soil is wetter than normal, local vegetation is healthy)

If conditions are on the dry end, which of the following US Drought Monitor categories best fit current conditions. To better judge the fit, see explanation of USDM categories here:

<https://droughtmonitor.unl.edu/About/AbouttheData/DroughtClassification.aspx>

Near Normal (Dnada)

### Quick synopsis of conditions that will appear in the main feed

Well, corn sweat is the buzzword of the week and it's been hot and humid. We're seeing some tar spot and other disease pressure popping up in fields. There's a mix of weed pressure across the county with mild insect presence. Corn is R3-R5 depending on planting date and soybeans are R3/R4 again pending planting date. Overall, crops are looking good.
