Logan

Region/State

Region 4

Which of the following best describes current conditions in this county?

Near Normal

If conditions are on the dry end, which of the following US Drought Monitor categories best fit current conditions. To better judge the fit, see explanation of USDM categories here:

<https://droughtmonitor.unl.edu/About/AbouttheData/DroughtClassification.aspx>

Near Normal (Dnada)

Quick synopsis of conditions that will appear in the main feed

Many crops across Logan, Menard, and Sangamon counties are getting closer to harvest. Much of the earlier-planted corn and soybeans have turned color and are nearing R6 (physiological maturity). The later-planted crops still have some time to go, but they are not far behind. Parts of the area, mainly Sangamon County, received some good rainfall last week, adding some needed topsoil moisture. There should now be enough moisture to see us through to harvest.
